

AR 3,5/2

COMPACT MEMBRANEUNIT

Björks Rostfria ABs compact membraneunit has two tubes with low pressure membranes. It produces 3.500 liter water per hour. Incoming pressure is as low as 4 bars.

The unit can be equipped with nanofilters which uses polymeric membranes to remove particles from 270 Dalton in different waters. Watercleaning with nanofilters can replace methods as coagulation, sandfiltering, softening, deironing etc...

Nanofilters obstructs bad smell and taste, bacteriums, viruses, colours, COD, fluorides, uran and BAM.

The development in membrantechniques has a rapid progress. It can be compared to other techniqueintensive industries.

*Björk Rostfria ABs AR 3,5/2 is very neat and compact.
Measurement 780 mm wide, 2320 mm long and 1820 mm tall.
Mounted in our factory and delivered ready to operate.*
